PATENT

## 1. (Currently Amended) A method comprising:

causing a debugger agent to select a debugger program ~~suitable for a device under test~~,  
wherein

the debugger agent is executed on a test server,

the debugger program is selected from a plurality of debugger programs,

the debugger program is suitable for a device under test,

the debugger agent is configured to select the debugger program from a plurality  
of debugger programs, and

the device under test is configured to execute a program under test;

causing the debugger agent to load the debugger program from the test server into the  
device under test;

sending a plurality of test commands, wherein

the test commands are sent from the test server to the device under test

according to a test script;

causing the debugger program to execute the plurality of test commands, wherein

the execution of the plurality of test commands by the debugger program act

as stimuli to the program under test; and

activating the debugger program when a watched event occurs during execution of the  
program under test, wherein

the debugger program is configured to operate in one of

an automatic debugging mode, and

manual debugging mode as defined by the watched event,

the debugger program is configured to record operation of the program

under test, when the debugger program is in automatic debugging  
mode, and

the debugger program is configured to allow the device under test to be

controlled via the debugger agent, when the debugger program is in  
automatic debugging mode.
